

16 Price stability can be said to occur if the measured value of the consumer prices index (CPI) is unchanged during the year.

Which statement is correct?

- A** For price stability to occur, there must be no changes in prices of any products.
- B** For price stability to occur, the number of products whose prices rise must exactly match the number whose prices fall.
- C** If some prices rise and others fall, there cannot be price stability.
- D** Different weightings of items used in the calculation of CPI mean that price stability can occur in many ways.
