

2. For $t \geq 0$, a particle moves along the x -axis. The velocity of the particle at time t is given by

$$v(t) = 1 + 2 \sin\left(\frac{t^2}{2}\right). \text{ The particle is at position } x = 2 \text{ at time } t = 4.$$

- (a) At time $t = 4$, is the particle speeding up or slowing down?
 - (b) Find all times t in the interval $0 < t < 3$ when the particle changes direction. Justify your answer.
 - (c) Find the position of the particle at time $t = 0$.
 - (d) Find the total distance the particle travels from time $t = 0$ to time $t = 3$.
-
