

1.10 The Normal Distribution

Name: _____ Class: _____ Date: _____

Total: 10 marks

Objective

Build the skills to answer exam questions on **the normal distribution**.

You must be able to:

- describe the **normal distribution** 正态分布 as a symmetric, bell-shaped model with mean μ and standard deviation σ
- apply the **empirical rule** 经验法则 (68–95–99.7)
- calculate a ***z*-score** z 分数 and use the standard normal distribution

1 Worked examples

Study these first. Each one shows the method for a question type used later.

■ The normal distribution

Symmetric and bell-shaped, fully described by its **mean** μ (center) and **standard deviation** σ (spread).

■ The empirical rule

For a normal distribution, about **68%** of values lie within 1σ , **95%** within 2σ , and **99.7%** within 3σ of the mean.

■ The *z*-score

$$z = \frac{x - \mu}{\sigma}$$

gives how many standard deviations x is from the mean. With $\mu = 100$, $\sigma = 15$, $x = 130$: $z = 2$.

2 Practice

2.1 State the three percentages of the empirical rule.

[2]

2.2 A normal distribution has $\mu = 50$, $\sigma = 5$. Find the z -score of $x = 60$. [2]

2.3 State the two parameters that define a normal distribution. [1]

3 Exam-style questions

3.1 The empirical rule says about 95% of data lie within [1]

- **A** 1
- **B** 2
- **C** 3
- **D** 4

standard deviations of the mean.

3.2 A z -score measures [1]

- **A** the mean
 - **B** how many standard deviations a value is from the mean
 - **C** the median
 - **D** the range
-

3.3 IQ scores are normal with $\mu = 100$ and $\sigma = 15$.

(a) Find the z -score for $x = 115$. [2]

(b) State the percentage of scores within 1 standard deviation of the mean. [1]

4 Go further

- work through the **1.10 The Normal Distribution** lesson on the **Learn** page;

- read the **Exploring One-Variable Data** section of the AP Statistics handout on the **Know** page.

Solutions

2.1 about 68% within 1σ , 95% within 2σ , 99.7% within 3σ .

2.2 $z = \frac{60 - 50}{5} = 2.$

2.3 the mean μ and the standard deviation σ .

3.1 B.

3.2 B.

3.3 (a) $z = \frac{115 - 100}{15} = 1.$ (b) about 68%.
